

- Ethiopia, one of the few African nations never colonized, symbolized African resilience and pride.
- This inspired Nelson Mandela.
- In 1962, he traveled to Ethiopia, where he received military training and political support under Emperor Haile Selassie.

Dengue outbreak Investigation in Metahara Town, East Shewa, Oromia, Ethiopia, 2023

Presentation outline

- **Introduction**
- **Methods**
- **Results**
- **Conclusion**
- **References**

Introduction

- On 25th July, 2023, Metahara health center reported an increased cases with fever, headache, joint pain, nausea, and vomiting, with negative result for malaria tests.
- The objectives of this study were:
 - To verify **existence of Dengue outbreak**
 - To **describe** the outbreak in terms of **person, place & time**
 - To identify **risk factors**
 - To **undertake prevention and control measures**

Methods and materials

- **Study setting and period:** Metahara town from 25th July/2023 to September 5/2023
- **Study design:** unmatched case-control
- **Source population:** All residents of Metahara town
- **Study population:**
 - All randomly selected patients having a positive laboratory test result for DENV using RT-PCR or RDT or epidemiologically linked cases during the study period.
 - Control was any person who lives in the same block with the case, but no signs or symptoms of the disease during the study period.

Methods and materials...

Sample size

- Calculated using Epi-Info Version 7, Power = 80%, CI = 95%, exposure among controls=80.7%, and AOR=0.32
- Case – to- control ratio = 1 to 2 and a total of 150 study participants

Sampling technique

- Sampling frame was prepared using line list of Dengue patients
- One case of Dengue and two subsequent Dengue free individuals as control

Methods and materials...

Data collection

- Face to face interview, document review, Line list of patients, Environmental investigation, by 4 Diploma Nurse
- Training on data collection tool and kobo collect mobile application

Dependent Variable: Cases of dengue

Independent Variables: Demographic factors, Environmental factors, and Individual factors

Methods and materials

Data analysis

- Kobo toolbox for data collection and SPSS for analysis
- Characteristics of study participants was described
- Binary logistic regression and 95% CI and respective AOR .
- Significance of associations was declared at p-value < 0.05

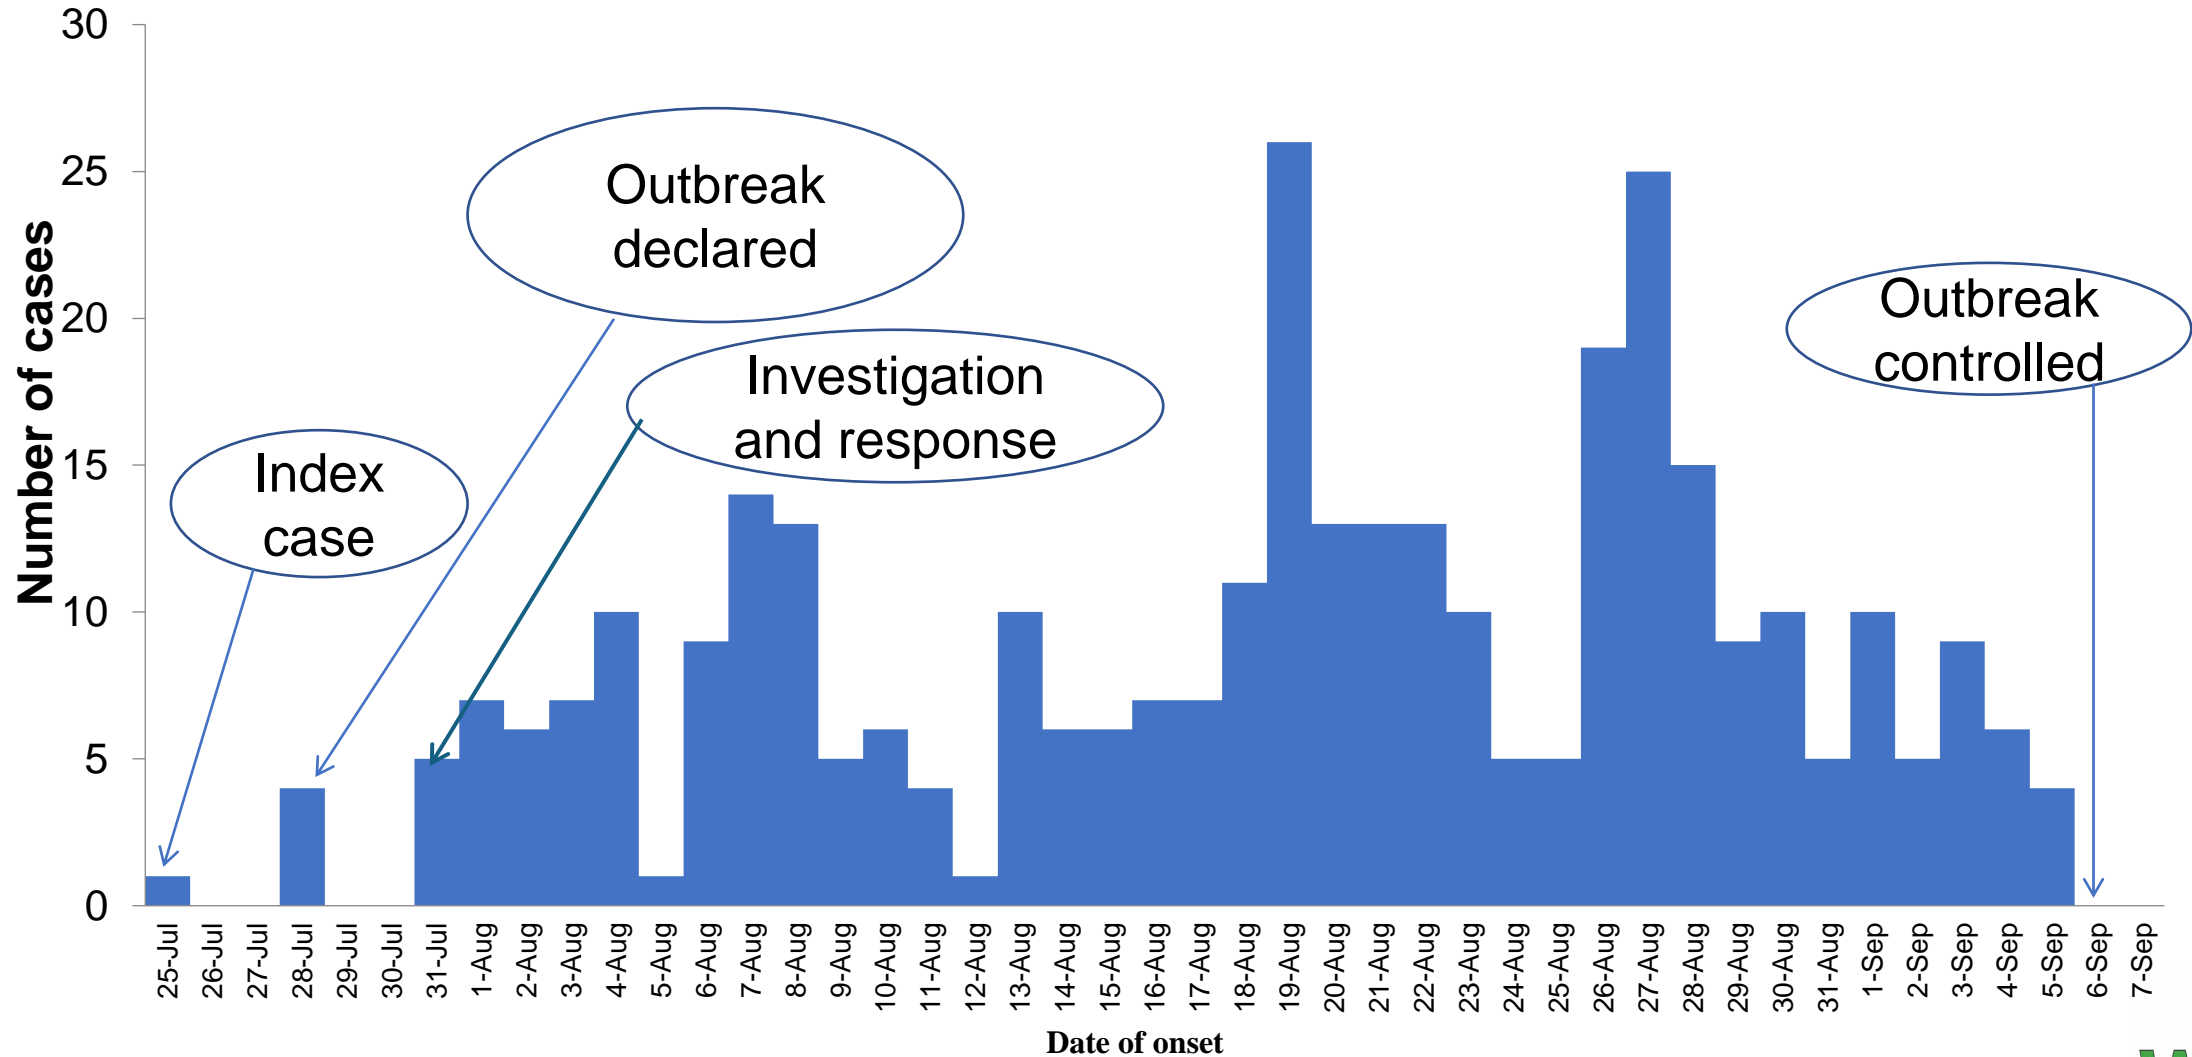

Results

- Index case was found in July 25/2023 (12-year-old female)
- 11 samples were sent to the National laboratory
- On July 28/2023, four DENV confirmed by RT PCR with **DEV-3**
- A total of 342 Dengue cases and 3 deaths (CFR of 0.88~1%)
- The overall attack rate (AR) was 7.18 per 1000 population

Results ...

Wearing long Sleeve	No	40(40%)	32(64%)	1	1
	Yes	60(60%)	18(36%)	0.38(0.19-0.76)	0.25(0.08-0.76)*
Hear about dengue	No	88(88%)	16(32%)	15.58(6.68-36.34)	25.2(8.21-77.34)**
	Yes	12(12%)	34(68%)	1	1

Prevention and control measures

Conclusion

- This study confirmed Dengue outbreak in Metahara town, Ethiopia.
- Not using long-lasting bed nets, open water storage, and lack of information about dengue are risk factors,
- Long-sleeved clothing is protective.
- Promoting utilization of LLITN, managing breeding sites, and enhancing awareness through community engagement are needed.

Thank you!
